EDUCATION

Vivekanand Institute of Management and Technology

Bachelor of Computer Application

2021 – 2024

Uttar Pradesh, India

WORK EXPERIENCE

Filuet India Pvt. Ltd

Software Engineer (React, Redux, Electron, Desktop Applications)

Aug 2024 – Present

Gurugram

Platform & Core Engineering (cross-project)

- * Established a **TypeScript-first monorepo** with layered folders and a reusable **MUI theme & component** library.
- * Designed a typed **Redux architecture** with **generic thunks**, typed actions/selectors and a shared state model.
- * Built a **custom Axios wrapper** with interceptors, retries, timeouts and centralized error handling.
- * Implemented **offline-first patterns**: local caching, sync/queueing, background downloads and local video hosting.
- * Standardized **logging & diagnostics**: Winston + DailyRotateFile, centralized Node logging service, Serilog for Windows services, structured logs and automated snapshots.
- * Created IPC and **process orchestration patterns**: Electron preload, IPC contracts, child_process/PM2 orchestration and watchdogs.
- * Hardened runtime security: **contextIsolation**, restricted IPC channels, secure storage and minimized attack surface.
- * Automated packaging and deployment: Electron builders, parallelized startup, auto-configs and resilient update flows.
- * Integrated telemetry & alerts: **SignalR** for real-time control, **NodeMailer** alerts, admin notifications and audit trails.
- * Delivered **i18n** (20+ langs) and accessibility-ready UI across the ecosystem.

E-Commerce Kiosk Vending Machine Software (React + TypeScript + Node.js)

- * Built a **41" touch-screen kiosk** e-commerce UI supporting browsing, cart, checkout, payment and automated dispensing.
- * Architected a **Node.js video service** for automated download, local hosting and CDN fallback for media playback.
- * Implemented secure **Chrome kiosk-mode** integration and local HTTP hosting for locked-down UX.
- * Integrated payment and hardware APIs for end-to-end transaction and dispensing workflows.

Kiosk Admin Portal (React + TypeScript + Node.js + MUI)

- * Delivered a **multi-tenant admin portal** with authentication, email verification, RBAC and secure sessions.
- * Built **user/role provisioning** and automated onboarding workflows with verification links.
- * Implemented **sales center** → **kiosk mapping** and device assignment model for hierarchical control.
- * Engineered a **media scheduler** for banners/videos with day/week/slot rules and per-kiosk targeting.
- * Designed kiosk management (catalogs, planograms, trays/belts) and per-kiosk configuration schemas.
- * Implemented **3-level category management** and full product lifecycle with audit logs.

Electron Desktop Application (Electron + React + TypeScript)

- * Migrated a large-scale React kiosk app to a **modular Electron runtime** embedding UI, Node services and media hosting.
- * Replaced Chrome kiosk dependencies with a **standalone desktop runtime** and unified service orchestration.
- * Built a **process orchestration layer** to boot multiple services, manage IPC and enforce lifecycle policies.
- * Cut **cold-start** from minutes to seconds via preload script optimization, parallel boot and config automation.
- * Added **self-healing** (structured logs, crash recovery, watchdog restarts and auto-resume).

Smart Boat Application (Electron + React + TypeScript)

- * Developed an **always-on-top utility** for kiosk monitoring, draggable help-center widget and quick recovery.
- * Built a **one-click restart** flow that captures screenshots, archives recent logs and notifies admins before restarting apps.
- * Automated **multi-app orchestration** including Chrome kiosk validation, health checks and coordinated restarts.
- * Integrated progress-tracked recovery UI and audit-ready snapshot storage for troubleshooting.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Python, SQL, HTML, CSS

Frontend: React, MUI, Formik, DnD Kit, DaisyUI, i18next

State & Data: Redux (typed), redux-thunk / generic thunks, Axios (custom wrapper), React Query (familiar)

Backend & Runtime: Node.js, Express, Electron, Windows Services, child_process, PM2

Databases & Storage: MongoDB, Mongoose, SQL Server (SSMS), Azure Blob Storage
Logging & Monitoring: Winston, winston-daily-rotate-file, Serilog, structured logs, custom logging server
Realtime & Messaging: SignalR, WebSockets, Azure Service Bus / Queues
DevOps & Tools: Git, GitHub, pnpm/npm/yarn, VS Code, Visual Studio, Postman, Docker (familiar), Electron packagers
Other: Nodemailer, Payment gateway integrations (UPI/cards), automated installers, CI/CD concepts, SOLID/DDD

PROJECTS

Smartbot	2024 – 2025
<i>Electron Desktop Application</i>	<i>Github Repo</i>
– Developed a lightweight Electron + React monitor reducing downtime by 40% across 50+ kiosks. – Integrated SignalR for remote restarts via a centralized dashboard, cutting support response by 50%. – Implemented email alerts (logs + screenshots) to IT using Nodemailer for rapid diagnostics. – Automated debugging: captured pre-restart screenshots and extracted last-5-min logs for faster triage.
